

CANADIAN ST. JOHN'S-WORT
Hypericum canadense

Located in wet soil throughout the Division.
Several recognized varieties and hybrids.

An erect, freely branching perennial, spreading by leafy offshoots; 5 to 75 cm high. Leaves are long and narrow, rounded at the tip and narrowed to the stem, usually 3-nerved; 1 to 4 cm long and 1 to 6 mm wide. Clusters of 1 to several flowers located at the ends of stems and branches. Flowers are small (less than 6 mm wide), 5-petaled and yellow; blooming from July to September.

May be used as food by ducks and grouse.
